EDUCATION

University of Washington

Bachelor of Science in Computer Science, Minor in Business

- **GPA: 3.84**

Seattle, WA

Expected December 2027

EXPERIENCE

Software Engineer Intern

June 2026 - September 2026

DoorDash - Ads and Promos

New York City, NY

- Designed and shipped the Marketing Credits Wallet Ledger, a full-stack app (React, gRPC/Kotlin backend) giving **300K+** advertisers transaction-level credit visibility; projected to increase credit usage **12%** and drive **\$3-4M** in incremental annual ad revenue
- Owned end to end system: built a Kotlin gRPC service with a Go routing shim, reconciling credit transactions across **3 services** and **2 databases** into a single ledger consistent with billing rules; shipped with zero post-launch incidents
- Built an **MCP-based** agent that queries internal docs and live tooling (Snowflake tables, Github, internal logs) to auto-triage credits support tickets with full account context, reducing manual investigation for on-call engineers

Software Engineer Intern

June 2025 – September 2025

Amazon - Sellers Success Program

Seattle, WA

- Enabled proactive seller support strategies by engineering a seller analytics system that processes **26M+** registration events and predicts potential dropoffs with **98%** accuracy using machine learning models
- Improved data accessibility and analytics capabilities by architecting scalable data pipelines with AWS Lambda, Glue, and S3 to consolidate fragmented seller data into a unified data lake for real-time insights
- Accelerated model deployment cycles from **days to hours** by implementing automated ML workflows using AWS CDK, DAGs, and SageMaker, enabling rapid iterations on predictive models
- Empowered seller product teams with interactive model access capabilities by designing a Bedrock-based agent that provides real-time access to model inferencing

Software Engineer Research Intern

September 2024 – June 2025

University of Washington

Seattle, WA

- Architected cross-platform mobile interface serving **15+** researchers by building Flutter application that streams real-time neurostimulation data from implantable devices, reducing data collection time by **60%**
- Optimized data transmission pipeline using gRPC and Protocol Buffers, achieving **99.7%** uptime and **40ms** average latency for device-to-cloud communication across **50+** concurrent sessions
- Enhanced research productivity by **3x** through development of real-time monitoring dashboard that processes and visualizes neural activity data from multiple devices simultaneously

PROJECTS

Market Predictor | *Python, Pandas, JupyterNotebook*

- Built end-to-end ML pipeline processing 10+ years of historical market data (**2M+** data points) to predict stock/crypto prices using ensemble methods and feature engineering
- Implemented real-time sentiment analysis system processing **50+** daily news articles via NY Times API, correlating sentiment scores with market movements to improve prediction accuracy by **23%**

CourtFinder | *Javascript, Firebase, React.js, Node.js, Express*

- Developed a full-stack web app for users to view the availability of courts at nearby public parks in my hometown
- Reduced court waiting time for users by implementing a real-time queue management system that tracks court availability across multiple parks, using dynamic data structures and WebSocket connections

TECHNICAL SKILLS

Languages: Java, Python, C/C++, JavaScript, HTML/CSS, R, TypeScript, Kotlin, Go

Frameworks: React, Node.js, Flask, JUnit, Express, gRPC

Developer Tools: Git, AWS Lambdas, S3, Glue, SageMaker, PySpark

Libraries: pandas, NumPy, Matplotlib, Jupyter Notebook
